Specify the model
Record dose, schedule, strength and intervention rules
Audit the design
Equalize bundled dimensions and cross them independently
Interpret the evidence
State the scale, outcome window and model limits
Complementary experiments
E1
Independent crossing
Dose × schedule × strength with and without reversion
E2
Governance contrasts
Coverage, compliance and label persistence
E3
Alternative dynamics
Anchored peer averaging and paired no-input controls
E4
Statistical calibration
Known truth, covariance and replication count
Verification & reproducibility checks
Selector correction · source integrity · paired seeds · reproducible analysis
